

FINANCIAL LITERACY APP · PYTHON + STREAMLIT

Financial confidence starts with one simple question.

A calm workspace for students and young adults to track money, build savings habits, and learn the basics.

Track · See · Save · Learn

Product exhibit · starting point

THE PROBLEM

Most beginners do not need more finance jargon.

Students often lack a practical way to connect income, spending, saving, and everyday decisions.

Too complex

Existing tools can feel too professional or too abstract to build confidence.

Too disconnected

Money habits appear as separate tasks instead of one understandable picture.

One calm first step

Show what is happening, explain why it matters, and make the next action obvious.

One simple workspace connects the money habits that matter.

Each part answers a different beginner question — and together they create a usable money picture.

TRACK

What came in?

Enter monthly income and everyday expenses.

SEE

Where did it go?

Understand category-wise spending and the current picture.

SAVE

What can I build?

Set a target and watch progress build.

LEARN

What does this mean?

Ask plain-English questions through the built-in assistant.

THE EXPERIENCE

The experience follows a natural money loop.

Start with a baseline, add what happened, review the pattern, then return with a better question.

Why a loop? Money confidence grows through small, repeatable reviews – not one complicated setup.

AI for Financial Literacy

A student-friendly app to track your spending, manage savings, and learn key financial concepts.

1. Set Your Monthly Income

Enter your monthly income or allowance. This is the total amount of money you receive each month.

Monthly Income / Allowance (\$)

0.00

 Set Income

01 • SET THE BASELINE

Starting with income makes the rest of the picture useful.

The first step captures monthly income or allowance as the baseline.

One number

The input stays focused instead of asking for a financial history.

One clear action

That baseline gives later spending and savings views a meaningful frame of reference.

Expense tracking turns vague spending into visible choices.

Product exhibit · expense entry

2. + Add an Expense

Record a new expense by filling in the details below.

Amount (\$)	Description (optional)
0.00	e.g. Lunch at the canteen
Category	Date
Food	2026 / 09 / 19
<button>+ Add Expense</button>	

3. 🗉 Your Expense Summary

⚠️ Please set your income first to see accurate calculations.

📄 No expenses recorded yet. Add your first expense above!

Capture the useful details.

Each entry records amount, description, category, and date.

Read the pattern.

Simple categories create a pattern students can actually interpret.

The goal is not perfect bookkeeping. It is a clearer next decision.

The summary makes the story of the month visible.

A category view replaces memory with a picture — and gives beginners a useful next move.

Summary · see the month at a glance

Categories · understand where money went

Helpful empty states matter. If income has not been set or there are no expenses yet, the interface should guide the next action without overwhelming a beginner.

04 · BUILD THE HABIT

A savings goal turns intention into a small, trackable habit.

Small, repeated actions make saving feel more achievable for a first-time learner.

CLEAR GOAL · VISIBLE NUMBER · ONE NEXT STEP

The AI assistant answers the question behind the question.

Ask about budgeting, saving, needs versus wants, emergency funds, interest, or responsible spending.

Plain English, not personalized advice. The assistant provides general educational information — not investment recommendations or individualized financial advice.

THE PRODUCT PRINCIPLE

Simple enough to use. Structured enough to teach.

Every screen should reduce uncertainty and make the next action obvious.

FOUNDATION

Python + Streamlit

A lightweight foundation for a fast, interactive learning tool.

BEHAVIOR

One next action

Track, review, save, or ask — without losing the thread.

END STATE

One repeatable habit

Students leave with a clearer view of their money and a practical habit they can repeat.

Financial confidence grows when the interface makes the next question easier to ask.
